DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,673,096. Although the conflicting claims are not identical, they are not patentably distinct from each other because the treating of tissue as opposed to a skin surface is an obvious change in scope.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 6, 8, 12, 13 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,176,130 to Kim. Kim teaches a heated massage therapy device has a hand-held housing, a mechanical vibration generator disposed within the housing, the mechanical vibration being transmitted to at least a heat-conductive, preferably infrared transparent portion

Art Unit: 3739

thereof, and at least one source of infrared radiation disposed within the housing (abstract).

The mechanical vibration is interpreted as automated, mechanical massage.

Regarding claim 6, the condition treated is intended use with no impact on the device structure.

Regarding claim 13, Kim teaches a simple on/off switch for the radiation making it inherently continuous when activated.
